

During first year of AREA project, AQUACARP group has successfully finished equipping of the Laboratory for molecular biology of fish and other aquatic organisms.

Newly purchased equipment will allow genetic analysis of fish origin, as well as quantitative trait loci involved in fish growth. These analysis will further upgrade selective breeding program of fish, which runs at the Center for fishery and applied hydrobiology at Faculty of Agriculture, University of Belgrade.

## PURCHASED EQUIPMENT

**Eppendorf Mastercycler pro S**

**Eppendorf Centrifuge 5430 R**

**QIAGEN TissueLyser LT**

**Vilber Lourmat Transilluminator**

**Eppendorf ThermoStat C**

**Eppendorf MiniSpin Plus**

**Eppendorf MixMate**

**Serva Electrophoresis system**
